Docker No.: M1071.1422/P1422

If checked, the optional complete set of "clean" claims pursuant to 37 C.F.R. § 1.121(c)(3) is attached hereto as Appendix B.

1. (Amended) A dielectric filter comprising:

a dielectric block;

a plurality of conductive through holes arranged in the dielectric block, each of the conductive through holes having a open end along a first surface of the dielectric block;

a respective coupling electrode connected to each conductive through hole, each coupling electrode formed on the first surface of the dielectric block and extended at least to a first edge of the dielectric block, the respective coupling electrodes having a gap therebetween and generating a capacitance therebetween so as to couple the plurality of conductive through holes, and

an outer conductor arranged on outer surfaces of the dielectric block.

2. (Amended) The dielectric filter according to Claim 1, wherein the coupling electrodes further extend onto a second surface of the dielectric block which intersects the first edge of the dielectric block.

3. (Amended) The dielectric filter according to Claim 1, further comprising input/output electrodes arranged on a second surface of the dielectric block and extending from a second edge, opposing the first edge, to generate capacitances between the open ends of the conductive through holes and the input/output electrodes.

7. (New) The dielectric filter according to Claim 2, further comprising input/output electrodes arranged on a third surface of the dielectric block and extending from a second edge, opposing the first edge, to generate capacitances between the open ends of the conductive through holes and the input/output electrodes.
